SUMMARY

Full-Stack Developer and Team Lead with 3+ years of experience building production software end to end with Flutter (web and mobile) and Node.js microservices. Leads a team of 7+ developers building BAWQ Telecom's multi-tenant IoT tracking SaaS, which tracks 10,000+ devices for 10+ providers and 100+ client companies; providers resell the platform under their own brand and manage their clients, with custom roles and permissions, white-label branding, billing and invoicing, and real-time fleet operations. Also built and shipped Fodwa, a 5-market classifieds and social marketplace live on Google Play and the App Store.

SKILLS

- **Languages:** Dart, JavaScript, TypeScript
- **Frontend & Mobile:** Flutter (Web, Android, iOS), React, Next.js, Kotlin (basic, Android Auto)
- **Backend:** Node.js, Microservices, REST APIs, GraphQL, Socket.IO / WebSockets
- **Infrastructure:** Docker, Redis, CI/CD, staging/production environments
- **SaaS & Business Systems:** Multi-tenant platforms, RBAC / custom roles, white-label, billing & invoicing, payment gateways (EasyPay), CRM
- **IoT & Telematics:** GPS tracking, geofencing, telemetry sensors (temperature, humidity, RFID), device commands, Google Maps
- **Architecture & State:** Clean Architecture, MVVM, SOLID, BLoC/Cubit, GetIt, GoRouter
- **Data & Services:** Redis, Firebase (Auth, FCM, Firestore), SQLite
- **Tools:** Git, GitHub, Postman, Figma, Agile/Scrum
- **Soft Skills:** Team leadership, mentoring, code review, sprint planning, communication

EXPERIENCE

BAWQ Telecom — Full-Stack Developer & Team Lead

Jan 2024 – Present

BAWQ runs a multi-tenant IoT tracking SaaS: providers onboard and manage their own clients, and clients track vehicles, assets, drivers, and sensors. Work spans the Flutter web portal, the mobile apps, and the Node.js backend, with 2,700+ commits (1,750+ web, 1,000+ mobile).

IoT Tracking Platform — Web Portal (Flutter Web) app.bawq.com

- **Multi-Tenant Provider/Client Portals:** Serves 10+ providers and 100+ client companies from 48 feature modules (16 provider, 32 client) in one Flutter Web codebase; providers manage client accounts, users, and devices, and can transfer clients between providers.
- **Custom Roles & Permissions:** Providers and clients create their own roles with feature-level permission configuration; plus session limits, active-session management with remote logout, and two-factor authentication.
- **White-Label:** Providers rebrand the platform with their own logo, colors, favicon, tab title, and custom domain, resolved at load time and applied across the UI and exported videos.
- **Billing & Invoicing:** Packages with included vs. metered devices, price tiers, and usage logs; invoices with discounts, legal entities, a draft/publish/reverse workflow, credit notes, payments, and versioned contracts and user agreements.
- **Fleet Operations:** Live map streaming real-time positions for 10,000+ devices over Socket.IO; geofences and POIs, playback with in-browser MP4 recording and branded watermark, and dispatch/transport orders (cargo and passengers) assigned by vehicle capacity on a live order map.
- **IoT Devices & Sensors:** Temperature, humidity, and RFID sensors, device commands, IMEI/SIM management with bulk import/export, and API keys for third-party integrations.
- **Reports & Alarms:** 12+ report types (trips, mileage, parking, idling, fuel, road speed, temperature, driver behavior) with PDF/Excel export and timezone-aware scheduling; 15 alarm types including harsh braking, seatbelt, and geofence events.
- **Maintenance:** Maintenance records, reminders, and cost summaries per vehicle.
- **Also:** Drivers (RFID, session revoke), user groups, add-on marketplace, support tickets, audit logs, chat, web push (FCM), and full Arabic/English RTL.

Backend & Platform (Node.js)

- **Microservices:** Build and maintain Node.js microservices, containerized with Docker and backed by Redis.

- **White-Label Platform:** Backend support for partner-branded deployments, with per-provider branding and configuration.
- **Payments Migration:** Migrated payment processing to the EasyPay gateway, covering checkout flows, payment callbacks, and transaction reconciliation.
- **Billing & Subscriptions:** Billing, subscription plans, and invoicing that drive packages and paid add-on modules.
- **CRM:** CRM features for managing customers, providers, and the sales/support pipeline.

Mobile App (Flutter, Android & iOS) Play Store | App Store

- **Leadership:** Lead a team of 7+ developers (sprints, task planning, code reviews, mentoring); top contributor to the mobile codebase with 1,000+ commits.
- **Real-Time Tracking:** Live GPS tracking over Socket.IO with subscription handling that holds up through reconnects; geofencing, route playback, and trip/stop/violation reports.
- **Commands & Alerts:** Remote vehicle commands, FCM push notifications, and an alarm center for SOS, overspeed, geofence, ignition, and offline events.
- **Chat, Auth & Builds:** Real-time chat with voice notes and media; JWT sessions, Google/Apple sign-in, and biometric re-auth; flavor-based staging/production builds with in-app update checks.
- **Android Auto (in progress):** Adding Android Auto support that shows the vehicle list and details on the car screen, using a native Kotlin car service bridged to Flutter.

Bawq Mate — Virtual Tracking Device App (Flutter) Play Store

- Turns a driver's phone into a virtual tracking device on the BAWQ platform: streams background GPS location so the driver appears on the live map like a hardware tracker, and lets drivers follow their assigned dispatch orders. Live on Google Play; App Store release in progress.

Bawq Speed Limit App (Flutter) Play Store

- Driver app that streams speed limit, current speed, and location to the server in real time, with navigation and trip logging.

Fodwa Corp — Flutter Developer (Part-Time) *Jan 2026 – Present*

Marketplace App (Flutter, Android & iOS) Play Store | App Store

- Built from scratch (400+ commits, 16 feature modules) and shipped to both stores a classifieds marketplace covering 5 markets (Used Goods, Real Estate, Cars, Free Goods, Asoaq), plus short-video Reels and social features.
- **Unified multi-market architecture:** One shared set of Cubits, data sources, and screens serves every market by resolving the API prefix at runtime, so adding a market requires no new data layer.
- **Listings:** Dynamic, category-driven attribute forms, search, filters, favorites, listing statistics, and shareable deep links for listings and reels.
- **Real-time chat:** WebSocket messaging with voice notes and an in-app AI chatbot assistant.
- **Localization & auth:** Full Arabic/English with RTL mirroring; Google/Apple sign-in, email verification, and guest browsing with masked contact details.

Car Parts Store Management App — Client Project (Private) *Feb 2024 – Jun 2024*

- Multi-role store management app: inventory CRUD (price, quantity, SKU), seller financial tracking with monthly reports, driver trip assignment, and a sales/revenue dashboard.
- Firebase Auth (email, Google) and Firestore real-time sync, built on Clean Architecture with BLoC/Cubit.

PROJECTS

MindExit — Location-Aware Smart Reminders github.com/senkop/mind_exit

- Geofence-triggered reminders and checklists driven by a background foreground-service tracking loop; Arabic/English RTL; Clean Architecture with BLoC/Cubit.

JustSay — Voice Expense Tracker github.com/senkop/just_say

- Logs expenses from spoken Egyptian Arabic using speech-to-text and a two-layer regex parser that extracts items and amounts; Material 3 UI with local persistence.

EDUCATION

Bachelor of Computer Science, Modern Academy
